diretto Task API

Benjamin Erb

Version v2 - Draft

Description

The Task API represents an external service that enables the handling of certain tasks. In terms of the diretto platform, a task is a request of specific footage. Reporters may take in part in tasks and contribute required documents as submissions. A task is always bound to a location and a time frame. A title and description define the task and optional tags allow to categorize it. Votes help to prioritize different tasks within the community. Tasks can be commented for exchange of ideas. Finally, every user can submit an existing document as footage for the task. The community can then rate the suitability of the submission regarding the task request. Besides the of directed collection of live footage, the Task API can also be used for specialized search queries. In this case, a task represents a search query and all potential results are submissions. This user-driven search is helpful for queries when only users can reason about appropriate hits by analyzing the documents.

Contents

Introduction

Supported authentication schemes:

- Basic Authentication

  Base URI: http://taskservice/v2

1 Comment

This resource represents a comment. Comments can be added by users to a task in order to discuss the task.

`http://taskservice/v2/task/` `task-id` `/comment/` `comment-id`

task-id	task ID
comment-id	comment ID

1.1 Create a new comment

Adds a new comment to the task.

URI

`http://taskservice/v2/task/` `task-id` `/comments`

Parameters

task-id	task ID

HTTP Method

`POST`

Formats

- `application/json`

Authentication

required

Request Entities

```
1  {
2      "content":"blablabla"
3  }
```

Responses

201 `Created` Comment has been created. The location header contains its URI and thus also the comment id.

400 `Bad Request` Invalid comment data.

404 `Not Found` Task not found.

Response Entities

n/a

1.2   Get all comments of task

Returns all comments of task.

URI

`http://taskservice/v2/task/` `task-id` `/comments`

Parameters

task-id	task ID

HTTP Method

`GET`

Formats

- `application/json`

Authentication

required

Request Entities

n/a

Responses

200 `OK` Comment list in response entity.

404 `Not Found` Task not found

Response Entities

```
1  {
2     "comments":{
3        "link":{
4           "rel":"self",
5           "href":"http://taskservice/v2/task/eafbad70-7972-11e0-a1f0
                 -0800200c9a66/comments"
6        },
7        "list":[
8           {
9              "comment":{
10                "id":"8e252710-77cf-11e0-a1f0-0800200c9a66",
11                "link":{
12                   "rel":"self",
13                   "href":"http://taskservice/v2/task/eafbad70-7972-11e0-
                       a1f0-0800200c9a66/comment/8e252710-77cf-11e0-a1f0
                       -0800200c9a66"
14                },
15                "content":"blablabla",
16                "creationTime":"2010-07-17T18:54:11.939Z",
17                "creator":{
18                   "id":"123456",
19                   "link":{
20                      "rel":"self",
21                      "href":"http://core/v2/user/123456"
22                   }
23                },
24                "votes":{
25                   "link":{
26                      "rel":"self",
27                      "href":"http://taskservice/v2/task/2671f383-a28c
                          -44d5-b86b-f7f04bb0a015/tag/
                          ef7987f2bd22f4a8cf236c83a57c1f6b/votes"
28                   },
29                   "up":12,
30                   "down":2
31                }
32             }
33          }
34       ]
35    }
36 }
```

1.3 Retrieve a single comment

Returns a single comment.

URI

http://taskservice/v2/task/ task-id /comment/ comment-id

Parameters

HTTP Method

GET

Formats

- application/json

Authentication

required

Request Entities

n/a

Responses

200 OK

404 Not Found

Response Entities

```
1    {
2      "comment":{
3        "id":"8e252710-77cf-11e0-a1f0-0800200c9a66",
4        "link":{
5          "rel":"self",
6          "href":"http://taskservice/v2/task/eafbad70-7972-11e0-a1f0
                  -0800200c9a66/comment/8e252710-77cf-11e0-a1f0-0800200
                  c9a66"
7        },
8        "content":"blablabla",
9        "creationTime":"2010-07-17T18:54:11.939Z",
10       "creator":{
11         "id":"123456",
12         "link":{
13           "rel":"self",
14           "href":"http://core/v2/user/123456"
15         }
16       },
17       "votes":{
18         "link":{
19           "rel":"self",
20           "href":"http://taskservice/v2/task/2671f383-a28c-44d5-b86b-
                    f7f04bb0a015/tag/ef7987f2bd22f4a8cf236c83a57c1f6b/
                    votes"
21         },
22         "up":12,
```

```
23          "down":2
24      }
25    }
26 }
```

2 Index

This entry resource provides information about the service instance.
    `http://taskservice/v2`

2.1 Get service instance data

Returns a static information about the deployed Task service instance.

URI

 `http://taskservice/v2`

Parameters

HTTP Method

GET

Formats

- `application/json`

Authentication

not required

Request Entities

n/a

Responses

`200 OK` Service instance data in response entity

Response Entities

```
1  {
2      "api":{
3          "name":"org.diretto.api.external.task",
4          "version":"v2"
5      },
6      "service":{
7          "name":"diretto Task Node",
8          "version":"0.1.0"
9      },
10     "deployment":{
11         "title":"fubar Task Service",
12         "contact":"n/a",
13         "website":{
```

```
14        "link":{
15            "rel":"self",
16            "href":"http://www.diretto.org"
17        }
18     }
19  },
20  "direttoMainServices":{
21     "core":{
22        "link":{
23            "rel":"self",
24            "href":"http://coreservice/v2"
25        }
26     }
27  }
28 }
```
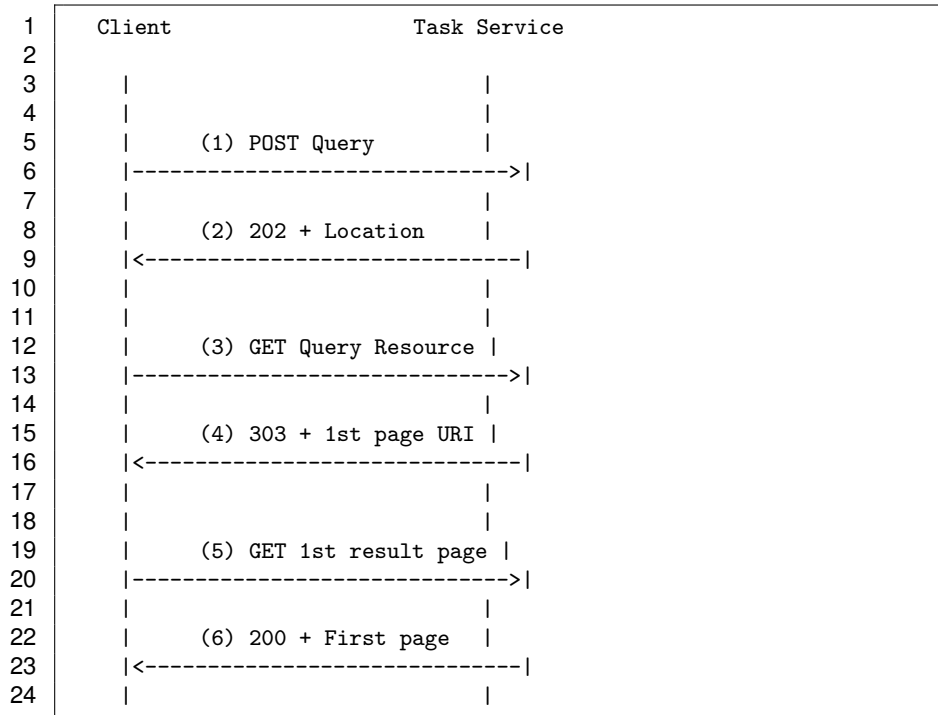

The JSON response contains information about the service identification and version, the actual deployment variables and links to the main service instance.

3 Query

An interface resource for query execution. A query must be dispatched to the server which will return a URI for the query. This URI then contains the results. Results are paginated using cursors. A query resource stores the initial query parameters, not the result set. Thus, queries can be re-executed by using the same URI, although the corresponding results may have changed. Be aware of this fact when applying caching to query results.

```
 1    Client                 Task Service
 2
 3      |                        |
 4      |                        |
 5      |      (1) POST Query    |
 6      |----------------------->|
 7      |                        |
 8      |     (2) 202 + Location |
 9      |<-----------------------|
10      |                        |
11      |                        |
12      |   (3) GET Query Resource |
13      |----------------------->|
14      |                        |
15      |   (4) 303 + 1st page URI |
16      |<-----------------------|
17      |                        |
18      |                        |
19      |   (5) GET 1st result page |
20      |----------------------->|
21      |                        |
22      |    (6) 200 + First page  |
23      |<-----------------------|
24      |                        |
```

Note that step 5 and 6 must be repeated for additional result pages. Also, step 1 and 2 can be skipped if an existing query (client already knows query URI) should be re-executed.

`http://taskservice/v2/query/stored/``query-id`

query-id	query id

3.1 Dispatch a query

Sends a query.

URI

`http://taskservice/v2/query`

Parameters

HTTP Method

POST

Formats

- n/a

Authentication

required

Request Entities

```
1   {
2       "query":{
3          "time":{
4             "start":"2010-06-29T19:15:51.765Z",
5             "end":"2010-06-29T19:15:50.000Z"
6          },
7          "location":{
8             "bbox":[
9                 100.0,
10                0.0,
11                105.0,
12                1.0
13             ]
14         },
15         "tags":[
16                 "http://taskservice/v2/tag/
                        ef7987f2bd22f4a8cf236c83a57c1f6b"
17         ]
18      }
19  }
```

A query is built using three parameters. While time frame and spatial bounding box are mandatory, the tag list may be empty. Please not that all parameters are combined conjunctively (using boolean AND), thus each emitted result entry matches all of the parameters.

Responses

202 `Accepted` Query accepted, result location in header.

400 `Bad Request` Invalid query parameters.

Response Entities

n/a

3.2   Forward to query result page

A request to a query URI will always be forwarded to the first page of the result set using the first cursor.

URI

```
http://taskservice/v2/query
```

Parameters

HTTP Method

```
GET
```

Formats

- `n/a`

Authentication

required

Request Entities

n/a

Responses

`303 See Other` Query accepted, result location in header.

`404 Not Found` Query not found.

Response Entities

n/a

3.3 Execute a common location-based query

A set of predefined queries for tasks currently valid by time and the user's position.
The type affects the order of the tasks emitted as results.

URI

```
http://taskservice/v2/query/common/ type ?lat= latitude &lon= longitude
```

Parameters

type	type: one of 'newest', 'unattended', 'expiring' or 'popular'
latitude	latitude
longitude	longitude

HTTP Method

```
GET
```

Formats

- n/a

Authentication

required

Request Entities

n/a

Responses

`303 See Other` Query accepted, result location in header.

`404 Not Found` Invalid coordinates.

Response Entities

n/a

3.4 Get query result page

Returns a paginated result page, identified by the cursor. A result page always contains links to the previous and next result page, if existing.

URI

`http://taskservice/v2/query/stored/` `query-id` `/cursor/` `cursor-id`

Parameters

cursor-id	cursor id

HTTP Method

`GET`

Formats

- n/a

Authentication

required

Request Entities

n/a

Responses

200 OK Result page in response.

404 Not Found Query or cursor not found.

Response Entities

```
1   {
2      "query":{
3         "id":"128ecf542a35ac5270a87dc740918404",
4         "link":{
5            "rel":"self",
6            "href":"http://taskservice/v2/query/stored/128
                 ecf542a35ac5270a87dc740918404"
7         }
8      },
9      "results":{
10        "count":101,
11        "page":{
12           "link":{
13              "rel":"self",
14              "href":"http://taskservice/v2/query/stored/128
                    ecf542a35ac5270a87dc740918404/cursor/def"
15           },
16           "list":[
17              {
18                 "task":{
19                    "id":"2671f383-a28c-44d5-b86b-f7f04bb0a015",
20                    "link":{
21                       "rel":"self",
22                       "href":"http://taskservice/v2/task/2671f383-a28c
                          -44d5-b86b-f7f04bb0a015"
23                    }
24                 }
25              }
26           ],
27           "related":[
28              {
29                 "link":{
30                    "rel":"first",
31                    "href":"http://taskservice/v2/query/stored/128
                       ecf542a35ac5270a87dc740918404/cursor/abc"
32                 }
33              },
34              {
35                 "link":{
36                    "rel":"previous",
37                    "href":"http://taskservice/v2/query/stored/128
                       ecf542a35ac5270a87dc740918404/cursor/abc"
38                 }
39              },
40              {
41                 "link":{
```

```
42              "rel":"next",
43              "href":"http://taskservice/v2/query/stored/128
                    ecf542a35ac5270a87dc740918404/cursor/ghi"
44          }
45        }
46      ]
47    }
48  }
49 }
```

A query result page containing links to the previous, next and first page.

4 Submission

This resource represents a submission. A submission basically suggests that a document represents a possible solution to the task.

http://taskservice/v2/task/ task-id /submission/ submission-id

task-id	task ID
submission-id	submission ID

4.1 Get all submissions of task

Returns all submissions of task.

URI

http://taskservice/v2/task/ task-id /submissions

Parameters

task-id	task ID

HTTP Method

GET

Formats

- application/json

Authentication

required

Request Entities

n/a

Responses

200 OK Submission list in response entity.

404 Not Found Task not found

Response Entities

```
1  {
2      "submissions":{
3          "link":{
4              "rel":"self",
5              "href":"http://taskservice/v2/task/eafbad70-7972-11e0-a1f0
                        -0800200c9a66/submissions"
6          },
7          "list":[
8              {
```

```
 9              "submission":{
10                  "id":"550e8400-e29b-11d4-a716-446655440000",

4.2 Create a new submission

Creates a new submission. A submission is represented by a document, identified by it's URI.

URI

`http://taskservice/v2/task/`⟨task-id⟩`/submissions`

Parameters

task-id	task ID

HTTP Method

`POST`

Formats

- `application/json`

Authentication

required

Request Entities

```
1  {
2      "document":{
3          "link":{
4              "rel":"self",
5              "href":"http://core/v2/document/550e8400-e29b-11d4-a716
                      -446655440000"
6          }
7      }
8  }
```

An example submission of a document.

Responses

201 `Created` The submission has been accepted. The location header contains its
URI and thus also the submission id.

400 `Bad Request` The provided data are incomplete or invalid.

403 `Forbidden` The document does not represent a valid submission for this task
(spatial location or time origin).

409 `Conflict` The document is already a submission for this task.

Response Entities

```
1  {
2      "error":{
3          "reason":"The spatial location of the document is outside the
                  task area."
4      }
5  }
```

A rejected submission (403) of a document, here due to it's meta data.

4.3   Retrieve submission details

Provides detailed information about this submission.

URI

`http://taskservice/v2/task/` `task-id` `/submission/` `submission-id`

Parameters

HTTP Method

GET

Formats

- application/json

Authentication

required

Request Entities

n/a

Responses

200 OK The submission details are available in the response entity.

404 Not Found Submission not found.

Response Entities

```
1  {
2    "submission":{
3      "id":"550e8400-e29b-11d4-a716-446655440000",

64              }
65           }
66        ]
67     }
68 }
```

5   Tag

This resource represents a tag. Users can append tags on various resources. The tag URI path is appended to the original URI. The following resources of the Task API can be voted on: *Task* and *Submission*

```
1     Client                    Task Service
2
3        |                         |
4        |                         |
5        |   (1) POST Tag          |
6        |------------------------>|
7        |                         |
8        |   (2) 201/202 + Location|
9        |<------------------------|
10       |                         |
11       |                         |
12       |   (3) POST Tag to Resource |
13       |------------------------>|
14       |                         |
15       |   (4) 201/202 + Location|
16       |<------------------------|
17       |                         |
18       |                         |
```

Steps 1+2 create a tag, steps 3+4 append the tag to a resource.
`http://taskservice/v2/tag/` `tag-id`

tag-id	tag ID

5.1   Create a new tag

Create a new tag that can be appended to resource thereafter.

URI

` http://taskservice/v2/tags`

Parameters

HTTP Method

`POST`

Formats

- `application/json`

Authentication

required

Request Entities

```
1  {
2      "value":"mytag"
3  }
```

Responses

201 `Created` Tag has been created. The location header contains its URI and thus also the tag id.

202 `Accepted` Tag already exists, but accepted.

400 `Bad Request` Invalid tag data (i.e. length).

Response Entities

```
1  {
2      "baseTag":{
3          "id":"ef7987f2bd22f4a8cf236c83a57c1f6b",
4          "link":{
5              "rel":"self",
6              "href":"http://taskservice/v2/tag/
                   ef7987f2bd22f4a8cf236c83a57c1f6b"
7          }
8      }
9  }
```

5.2 Retrieve a tag

Returns a tag entry.

URI

http://taskservice/v2/tag/ `tag-id`

Parameters

HTTP Method

GET

Formats

- `application/json`

Authentication

required

Request Entities

n/a

Responses

`200 OK`

`404 Not Found` Tag not found.

Response Entities

```
1  {
2     "baseTag":{
3        "id":"ef7987f2bd22f4a8cf236c83a57c1f6b",
4        "link":{
5           "rel":"self",
6           "href":"http://taskservice/v2/tag/
                  ef7987f2bd22f4a8cf236c83a57c1f6b"
7        },
8        "value":"mytag",
9        "creationTime":"2010-07-17T18:54:11.939Z",
10       "creator":{
11          "id":"123456",
12          "link":{
13             "rel":"self",
14             "href":"http://core/v2/user/123456"
15          }
16       }
17    }
18 }
```

Note that the creation time denotes the initial usage of this time.

5.3 Retrieve a single tag of a resource

Returns a single tag entry that has been appended to a resource.

URI

`http://taskservice/v2/tag/` `tag-id` `/` `resource` `/tag/` `tag-id`

Parameters

resource	resource identifier
tag-id	tag ID

HTTP Method

`GET`

Formats

- `application/json`

Authentication

required

Request Entities

n/a

Responses

`200 OK`

`404 Not Found` Resource not found.

Response Entities

```
1   {
2      "tag":{
3         "id":"ef7987f2bd22f4a8cf236c83a57c1f6b",
4         "link":{
5            "rel":"self",
6            "href":"http://taskservice/v2/task/2671f383-a28c-44d5-b86b-
                  f7f04bb0a015/tag/ef7987f2bd22f4a8cf236c83a57c1f6b"
7         },
8         "baseTag" : {
9               "link":{
10                 "rel":"self",
11                 "href":"http://taskservice/v2/tag/
                     ef7987f2bd22f4a8cf236c83a57c1f6b"
12              }
13        },
14        "value":"mytag",
15        "creationTime":"2010-07-17T18:54:11.939Z",
16        "creator":{
17           "id":"123456",
18           "link":{
19              "rel":"self",
20              "href":"http://core/v2/user/123456"
21           }
22        },
23        "votes":{
24           "link":{
25              "rel":"self",
26              "href":"http://taskservice/v2/task/2671f383-a28c-44d5-b86b-
                     f7f04bb0a015/tag/ef7987f2bd22f4a8cf236c83a57c1f6b/
                     votes"
27           },
28           "up":12,
29           "down":2
30        }
31     }
32  }
```

24

Note that the creation time denotes the time this tag has been appended to the resource for the first time.

5.4   Append a tag to a resource

Appends a new tag to the resource.

URI

```
http://taskservice/v2/ resource /tags
```

Parameters

resource	resource

HTTP Method

POST

Formats

- `application/json`

Authentication

required

Request Entities

```
1  {
2     "baseTag":{
3        "id":"ef7987f2bd22f4a8cf236c83a57c1f6b",
4        "link":{
5           "rel":"self",
6           "href":"http://taskservice/v2/tag/
                    ef7987f2bd22f4a8cf236c83a57c1f6b"
7        }
8     }
9  }
```

Responses

201 `Created` Tag has been appended. The location header contains its URI and thus also the tag id.

202 `Accepted` Tag already exists, but accepted.

400 `Bad Request` Invalid tag data (i.e. ID mismatch).

404 `Not Found` Tag or resource not found.

Response Entities

n/a

5.5 Retrieve all tags of a resource

Returns a single tag entry.

URI

```
http://taskservice/v2/ resource /tags
```

Parameters

resource	resource

HTTP Method

```
GET
```

Formats

- `application/json`

Authentication

required

Request Entities

n/a

Responses

`200 OK`

`404 Not Found` Resource not found.

Response Entities

```
1   {
2      "tags":{
3         "link":{
4            "rel":"self",
5            "href":"http://taskservice/v2/resource/tags"
6         },
7         "list":[
8            {
9               "tag":{
10                 "id":"ef7987f2bd22f4a8cf236c83a57c1f6b",
11                 "link":{
12                    "rel":"self",
```

```
13              "href":"http://taskservice/v2/task/2671f383-a28c-44d5-
                    b86b-f7f04bb0a015/tag/
                    ef7987f2bd22f4a8cf236c83a57c1f6b"
14          },
15          "baseTag":{
16              "link":{

6 Task

This resource represents a task.

```
http://taskservice/v2/task/ task-id
```

task-id	task ID

6.1 Retrieve a single task snapshot

Returns a complete set of data of this task, including comments, votes and sumbis-sions.

URI

```
http://taskservice/v2/task/ task-id /snapshot
```

Parameters

HTTP Method

GET

Formats

- application/json

Authentication

required

Request Entities

n/a

Responses

200 OK

404 Not Found

Response Entities

6.2 Fetch multiple task snapshots

Fetches a set of task snapshots.

URI

```
http://taskservice/v2/task/ task-id /snapshot
```

Parameters

HTTP Method

```
POST
```

Formats

- `application/json`

Authentication

required

Request Entities

```
1  {
2     "tasks":[
3        "http://taskservice/v2/task/2671f383-a28c-44d5-b86b-f7f04bb0a015
             ",
4        "http://taskservice/v2/task/2671f383-a28c-bla"
5     ]
6  }
```

Responses

200 `OK` Results in response body. Note that tasks may still have raised errors (i.e. when not found).

400 `Bad Request` Invalid query or too many items requested.

Response Entities

```
